

## Project #2

**Description:** In volleyball, there are 5 matches in a game. My daughter's volleyball league would like a program that will accept the number of points that each team scored in the 5 matches and print out the data along with the winner. The winning team is that one that wins the most matches. Note: It is not necessarily the team that scores the most number of points.

Here are an example of the program running.

### Sample Run

This program will track the scores in a volleyball game.

Enter the score that team 1 got on match 1?

>> 25

Enter the score that team 2 got on match 1?

>> 20

Enter the score that team 1 got on match 2?

>> 25

Enter the score that team 2 got on match 2?

>> 20

Enter the score that team 1 got on match 3?

>> 15

Enter the score that team 2 got on match 3?

>> 25

Enter the score that team 1 got on match 4?

>> 10

Enter the score that team 2 got on match 4?

>> 25

Enter the score that team 1 got on match 5?

>> 25

Enter the score that team 2 got on match 5?

>> 20

	Team 1	Team 2	Winner
Match 1	25	20	Team 1
Match 2	25	20	Team 1
Match 3	15	25	Team 2
Match 4	10	25	Team 2
Match 5	25	20	Team 1

Winner is Team 1.
